On the Corrected Filing Receipt that we have received for the referenced application, the title is recorded incorrectly. The correct title is "IL-12 Enhancement of Immune Responses to T-Independent Antigens". Please correct this error and issue a corrected Filing Receipt. A marked up copy of the incorrect Filing Receipt that we received today is enclosed. Also enclosed are copies of the Utility Patent Application Transmittal and page 1 of the Specification, each showing the correct title, for your convenience.

IL-12 Enhancement Of Immune Responses To T-Independent Antigens

RELATED APPLICATION(S)

This application is a continuation of Application No. 09/035,594, filed March 5, 1998. The entire teachings of the above application(s) are incorporated herein by

GOVERNMENT SUPPORT

The invention was supported, in whole or in part, by grant R21 AI38380 from the National Institutes of Health. The Government has certain rights in the invention.

BACKGROUND OF THE INVENTION

5 Non-protein antigens such as polysaccharides and lipids induce antibody responses without the need for T cells and are therefore referred to as T-independent (TI) antigens. However, because of the lack of involvement of T cell help, most TI antigens are relatively poor immunogens. In general, responses to TI antigens consist of
10 IgM antibodies of low affinity, and do not show significant heavy chain class switching, affinity maturation, or memory. The practical significance of TI antigens is that many bacterial capsular and cell wall polysaccharides belong to this category and are therefore relatively poor at eliciting humoral immunity.

Young children and the elderly are particularly susceptible to life-threatening infections with encapsulated bacteria such as pneumococcus and meningococcus. It has
15 been estimated by the Centers for Disease Control that in the U.S. per year, *Streptococcus pneumoniae* causes 3,000 cases of meningitis, 50,000 cases of bacteremia, 500,000 cases of pneumonia, and 7 million cases of otitis media (middle ear infection). The World Health Organization has estimated that worldwide, this organism causes 100 million cases per year with 10
20 million deaths per year. Similarly, *Neisseria meningitidis* is the leading cause of
